

For search criteria the following was used:

Reporting Year:	In	1987 – 2014
Off-site Transfer Location Name	Containing	"SOUTHBRIDGE"
Off-site Transfer Location City	Equal to	"SOUTHBRIDGE"
Off-site Transfer Location ZIP	Beginning with	"01550"

The request was for data from 1987-2008 data, however, staff included 2009-2014 data as well. This information can be easily removed from the attached spreadsheet if so desired.

For reporting years 1987-2008, 42 transfers were reported. When including the extra years (2009-2014), a total of 72 transfers were reported.

Staff weren't exactly sure what the "Southbridge Landfill" was, so, they included the search criteria mentioned above. Using it, seven distinct off-site transfer locations were returned. Their names and addresses are listed below. Some of these variations might be the same place. If not, this information can be sorted on the spreadsheet by "TRANSFER_LOC_NAME" and/or "TRANSFER_ADDRESS" and then the ones that don't apply can be deleted.

Transfer Location Name	Address
1. SOUTHBRIDGE RECYCLING & DISPOSAL PARK	165 BAREFOOT RD
2. SOUTHBRIDGE MUNICIPAL TREATMEN, T PLANT	70 FOSTER ST
3. SOUTHBRIDGE LANDFILL	AIRPORT RD
4. SOUTHBRIDGE LANDFILL	165 BAREFOOT RD
5. CASELLA SOUTHBRIDGE LANDFILL	165 BAREFOOT RD
6. N. E. ORGANICS SOUTHBRIDGE LANDFILL	100 MECHANIC ST
7. SOUTHBRIDGE LANDFILL	135 BAREFOOT ROAD

Other notes about data:

1. There are a few transfer amounts in the data that are Zero. These are legitimate. In other words that's what the facility reported on their form Rs. TRI-MEweb has gone through a number of business rules over the 10 years. Talking with Velu, we think one reason might be that TRI-MEweb pre-populated off-site transfer location data from the previous year. In such cases, if the facility didn't have any transfers to the pre-populated location, they may have just put in a zero for the amount (easier than deleting the location).
2. There were no range codes reported. See the last column in the spreadsheet. Staff included this just in case range codes were reported.
3. Extra fields with metadata about the chemicals transferred (PBT, Metals Flag, Carcinogen, etc.) were included. If they don't apply this information can be easily deleted.
